SPLIT GRAFT POST-OPERATIVE WOUND CARE INSTRUCTIONS

The following wound care instructions are necessary for the best healing results possible.

1. Gently clean the area twice daily with antibacterial soap and water and a terry cloth towel.
2. Apply bacitracin or polysporin ointment. **Do not use Neosporin.**
3. If the area is bleeding or seeping, apply a bandage. The bandage applied today may be removed in 24 hours. If the area is not bleeding or seeping, you may leave the area uncovered while you are at home. It is recommended to cover the area for the first 5-7 days when leaving the house.

If re-bandaging, please try to omit the bandage between the 5-7th day allowing air to the wound to help the healing process.

The area(s) may get wet while showering in 24-48 hours.

If you have any questions, please do not hesitate to call our office at (904) 923-6647.
